**Underlying Conditions & Amplifying Stressors**

- Pre-existing health conditions
- Economic downturn
- Vulnerable populations
- Inadequate rural healthcare
- Aging infrastructure
- Lack of understanding of risks
- Economic & social inequity

**WARMING**

- Increased potential for fast-moving diseases (e.g. West Nile Virus)
- Extreme heat days causing exhaustion & cardiovascular problems
- Longer/warmer spring heightens pollen allergies and asthma
- Higher temperatures reduce productivity & increases stress

**DROUGHT AND WILDFIRE**

- Wildfire & flood events cause death/injury
- Reduced water quality & availability
- Impact on food quality and availability
- Population displacement
- Strain on general wellbeing & mental health

**HEALTH + SOCIETY**

- Impacts on health, well-being & access to important services.
  - Substantial transportation disruptions affecting commerce, access to key services
  - Extreme events cause severe physical & mental health issues
  - Life-safety during extreme precipitation
  - Disruption of health care services/access
